THE PERSPECTIVES FOR INTRODUCTION OF ONLINE TEACHING IN THE SYSTEM OF EDUCATION

The theme such as online training is chosen for our research, because it is, in our opinion, extremely relevant at the present time. We believe, that the introduction of online education will help increase the maximum number of students. For example, now we can find many online platforms for obtaining various skills. Among them the following can be noted: *Stepik*, *GeekBrains*, *Coursera*, *TedEd*, *MIT Open Courseware* and many others. There are a lot of video and text materials on these educational platforms, which already help people to get qualifications in various fields of science and especially in programming.

An example of one of the educational platforms

In the future this system will make it possible to create a unified online learning environment (*UOLE*) for receiving educational content. The consequence of the *UOLE* creation will be the improvement of communication between the students and the teaching staff. Many students will be able to explore a variety of materials on the subjects and discuss the issues, which appeared in the course of this study, or to solve complex problems. In the future as well, to our mind, students will be able to better manage their time, because they will be less likely to attend universities

physically than now.

Everyone will be able to correctly and conveniently plan the educational process

Based on the foregoing, we can conclude that the introduction of online teaching will greatly facilitate access to education. Due to the current situation with coronavirus (*COVID-19*), the world is gradually realizing that distance learning of educational material can be even more effective than traditional lecture attendance. The situation with global quarantine and the forced transition to distance learning has shown the inability of existing systems to fully provide students with the necessary information and the need to create a more coherent and structured environment for this type of training.
